National Institute of Research and Development in Mechatronics and Measurement Technique (INCDMTM), headquartered in Bucharest, Romania, is active in applied research and development, focused on mechatronics and smart measurement techniques. Established in 1971, the institute developed its capabilities in accordance with National and European trends and guidelines, as proven by advanced laboratory infrastructure, the existence of the technology transfer center and the existence of the Regional Cluster for Mechatronics.

Our research topics are useful in a variety of industries: Mechanical and plant engineering, Industrial automation, Automotive, Smart home and smart city.

Our skilled team of engineers and researchers work together to find new perspectives and innovative solutions to problems arising from today's industry and society needs, that require multidisciplinary approaches in the following competence areas:

1. Smart Measurement Mechatronics and manufacturing technologies:

Mechatronic integrated control systems, Smart precision and control measurements, Complex automation and control systems, Embedded and real-time systems, Environmental engineering systems and renewable energy, Dynamic and vibrations, Smart thermo-technical measurements, Virtual simulation and physical testing, Software development for embedded systems, Adaptive and smart manufacturing systems, Smart micro/nano manufacturing technologies, Mechatronics for advanced manufacturing systems, Handling technology and robotics.

2. Biomedical Mechatronics and Robotics:

Biomechatronics, Smart systems, Data Acquisitions and Robotics, Investigation Microsystems, Biosensors and Biomaterials, Smart assistive platforms and devices that enhance the physical capabilities of patients, Smart assistive platforms and devices that monitor and enhance the physical capabilities of patients, Rapid Prototyping.

3. Mechatronic Micro and Nanotechnologies:

Process Micro and Nanotechnologies, Mechatronic MEMS and NEMS, Smart Measurement Technologies, Materials characterization and tribological parameters determination.

Cefin Publishing House was established in the National Institute for Research and Development for Mechatronics and Measurement Technique in 1991, with the main purpose of promoting and publishing of the most important results of research. Cefin Publishing main product, with international visibility, is the **International Journal of Mechatronics and Applied Mechanics**, a publication dedicated to the global advancements of mechatronics and applied mechanics research, development and innovation, providing researchers and practitioners with the occasion to publish papers of excellent theoretical value on applied research. It provides rapid publishing deadlines and it constitutes a place for academics and scholars where they can exchange meaningful information and productive ideas associated with these domains.
